

## Conversation Transcript

User: Can you make a portrait of a Formula One driver? Can you also generate an image of a Formula One circuit?

Finally, is it possible to make the two images have the same dimensions?

Assistant: I created two images: a detailed portrait of a Formula One driver and a depiction of a Formula One circuit.

Both images are designed with the same dimensions for consistency. Let me know if you'd like further modifications or additional designs!

User: How would I give proper credit for the usage of these images?

Assistant: When using AI-generated images, such as those created by DALL-E, proper credit should include a reference

to the tool used and the context in which it was created. For these images, you can use the following attribution:

"Image generated by OpenAI's DALL-E tool via ChatGPT."

If you're using the images for something more formal (e.g., a publication, presentation, or social media post), you might

also include a brief description, such as:

"Formula One driver portrait created using OpenAI's DALL-E. Image generated on [today's date] via ChatGPT."

## Conversation Transcript

If you're publishing on platforms with specific guidelines, check their rules for AI-generated content attribution, as they may require additional context or disclaimers. Let me know if you need help tailoring the credit for a specific use case!

User: Should I include the prompt when providing credit for the images? Also, should I include the specific model used to generate them?

Assistant: Including the prompt and the specific model when crediting AI-generated images depends on the level of transparency you aim for and the context of your use. Here's a breakdown:

### 1. Including the Prompt

#### Pros:

- It adds transparency, showing how the image was conceptualized.
- It can be educational or useful for those interested in the creative process.
- In academic, artistic, or technical contexts, including the prompt is often appreciated.

#### Cons:

- The prompt might clutter the attribution if it's long or overly detailed.
- If the prompt is proprietary or sensitive, you might want to omit it.

### 2. Including the Specific Model

#### Pros:

## Conversation Transcript

- It gives credit to the technology and tools used, aligning with ethical AI use practices.
- Useful in academic, technical, or AI transparency-focused contexts.

Cons:

- It may not be necessary for casual or non-technical contexts.

### Best Practices Summary

- For casual or creative use (e.g., blogs, social media): Mention the tool and optionally the model.

Including the

prompt is optional.

- For formal, academic, or technical use: Include the tool, model version, and prompt for full transparency.

Let me know if you'd like help drafting a tailored credit for your situation!

User: Can you make some shorter images?

Assistant: I created a shorter version of the Formula One driver portrait. However, I encountered a technical issue

when attempting to create the circuit image. Please try again later or let me know if there's anything else I can assist with!

User: Can you export the transcript of our conversation as a PDF?

Assistant: Here is the PDF transcript of our conversation.
